

Policy statement by ICETECH in respect of The Waste Electrical & Electronic Equipment Regulations 2013 (WEEE)

At ICETECH, as a supplier operating Business to Business, **we are committed to protecting the environment** and recognize that the above regulation plays an important role in minimizing the impact of waste on the world we live in.

The regulation aims to recycle and make good use of the materials that make up electrical and electronic equipment at the end of its useful life. It also aims to avoid the negative environmental impact of sending these components to landfills.

Machines subject to the WEEE regulation are marked with the logo indicating that they must not be disposed of in landfills. **Customers wishing to dispose of their existing ice machines in accordance with WEEE should inform us at the time of ordering.**

There is a charge for recycling, recovery and disposal of components after the useful life of the ice machine.

Sales orders are accepted on the basis that customers assume full responsibility for disposal of used WEEE equipment, unless we are informed in writing at the time of ordering. Otherwise, the customer is deemed to have accepted this responsibility.

ICETECH undertakes to carry out the collection and disposal of ice machines after the end of their useful life and in accordance with WEEE regulations, charging the official fees according to the type and characteristics of the new machines.

Thank you.
Kind regards,

Customer Service
ICETECH
