-----------------------	----

1. INTRODUCTION

Thank you for purchasing a 'SS' Ice Cube Maker by ITV. You have purchased one of the most reliable ice-making products on the market today.

Carefully read the instructions contained in this manual since they provide important information relative to safety during installation, use, and maintenance.

1.1.- WARNING

This appliance is intended to be used in professional and similar applications.

The installation of this equipment should be done by the Service Department.

The socket should always be placed on an accessible location.

When positioning the appliance, ensure the supply cord is not trapped or damaged.

Do not locate multiple portable socket-outlets or portable power supplies at the rear of the appliance.

Always disconnect the power supply from the machine before any cleaning or maintenance service.

Any change needed on the electrical installation for the appropriate connection of the machine, should be exclusively performed by qualified and certified professional personnel only.

Any use by the ice maker not intended to produce ice, using potable water, is considered inappropriate.

It is extremely dangerous to modify or intend to modify this machine and will void warranty.

The appliance is not to be used by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction.

Children being supervised not to play with the appliance.

Connect to potable water supply only. To see "Installation" chapter (5).

This machine is not intended to be used outdoors nor exposed to the rain.

The machine should be connected using the power cord supplied with the equipment.

It is mandatory to ground the equipment to avoid possible electric shock on individuals or damages to the equipment. The machine should be grounded pursuant local and/or national regulations. The manufacturer shall be held harmless in case of damages arising due to the lack of the ground installation. To see "Installation" chapter (7).

In order to assure the proper operation and efficiency of this equipment, it is extremely important to follow the recommendations of the manufacturer, especially those related to cleaning and maintenance operations, which should be performed by qualified personnel only.

CAUTION: The intervention of non-qualified personnel, besides of being dangerous, could result in serious malfunctioning. In case of damages, contact your distributor. We recommend always using original spare parts.

The company reserves the right to make changes in specifications and design without prior notice.

This signal indicates “Risk of fire / Flammable materials” because of the use of flammable refrigerant.

For compression-type appliances that use flammable refrigerants should additionally consider the substance of the warnings listed below:

- Keep ventilation openings, in the appliance enclosure or in the built-in structure, clear of obstruction.
- Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.
- Do not damage the refrigerant circuit.
- Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.
- Do not store explosive substances such as aerosol cans with a flammable propellant in this appliance.

In case of a flammable refrigerant leakage:

- Do not generate flames close to the appliance.
- Do not switch on/off or plug in/off the appliance.
- To ventilate immediately the area where appliance is located by opening doors and/or windows.
- To call to an authorized technical service.

Disposal of the ice maker: The company encourages to follow the regulations of each country regarding eco-friendly disposal of electric and electronic devices such this one. User who is

wanting to dispose of this equipment must contact the manufacturer and follow the method to appropriate differentiated collection for the subsequent treatments.

1.2.-RECEPTION OF THE MACHINE

Inspect the outside packing. In case of damages, make the corresponding claim to the carrier. To confirm the existence of damages, unpack the machine in the presence of the carrier and state any damage on the equipment on the reception document or freight document.

Always state the machine number and model. This number is printed on three locations:

(1) Packing: On the outside, it contains a label with the serial number.

(2) Exterior of the unit: On the back panel of the unit, there is a label with the same characteristics as the previous one.

(3) Nameplate: On the back of the machine.

ESB40632291				S/N: 18467765	
CD: 15040U					
Volt. 220-240 ~	Ph.	Hz. 50	A. 4.1	 10	
Ref. R290	g. 115	w. 510	clas. T		
condensacion-condensation-kondensation AIRE-AIR-LUFT				Made in Spain/EU	
 			 		

Check that in interior of the machine the installation kit is complete and comprises:

- Ice scoop
- $\frac{3}{4}$ inlet water hose
- 22 mm drain hose

- 1 filter
- User manual.

Warranty and serial number **CAUTION:** All packing elements (plastic bags, carton boxes and wood pallets) should be kept outside the reach of children, as they are a source of potential hazard.

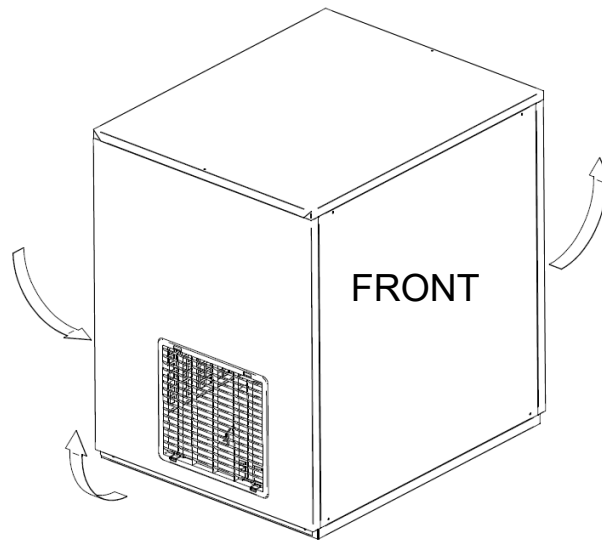

2. INSTALLATION

2.1.- PLACING OF THE ICE MAKER

This ice maker is not designed for outdoor operation. The icemaker should not be located next to ovens, grills or other high heat producing equipment.

The machines are designed to operate at room temperature between 10°C and 43°C. There may be some difficulties in ice cube removal under the minimum temperatures. Above the maximum temperature, the life of the compressor is shortened and the production is substantially lower.

The airflow in air-cooled machines enters from the rear and exits through the side grilles. Do not obstruct the grilles with any objects.

In case the front louver is not enough, the exit is either total or partially obstructed or due to its placement it will receive hot air from another device, we recommend, in case it is not possible to change the location of the machine, TO INSTALL A WATER CONDENSER.

IT IS IMPORTANT THAT THE WATER PIPING DO NOT PASS BY OR NEAR SOURCES OF HEAT SO AS NOT TO LOSE ICE PRODUCTION.

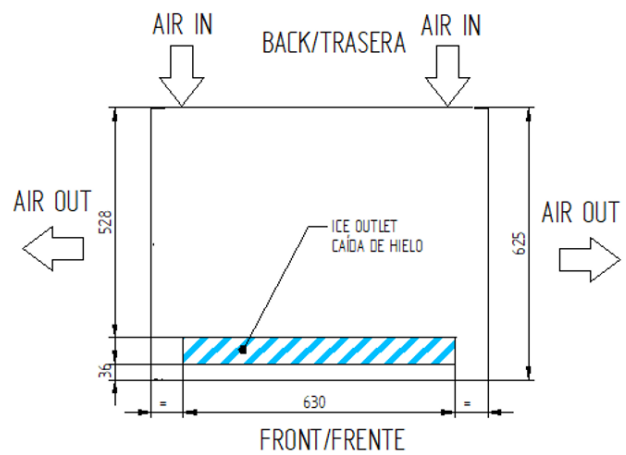

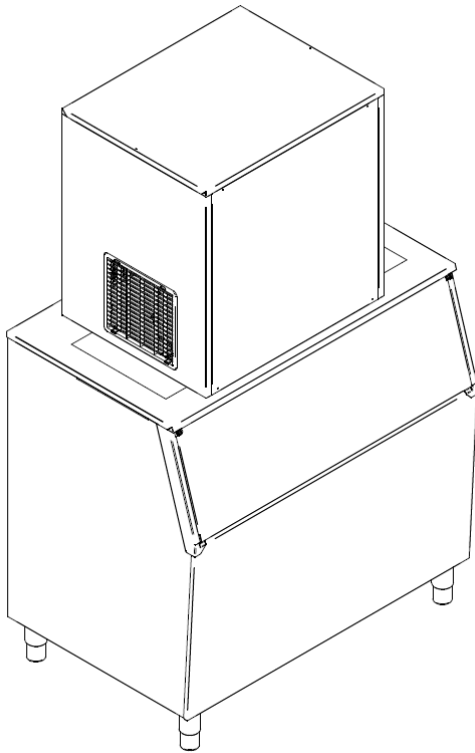

The location must allow enough clearance for water, drain and electrical connections in the rear of the ice machine. It is important that the water inlet piping does not pass near sources of heat so as not to lose ice production.

2.2.-LEVELLING OF THE ICE MAKER

The machine is placed on top of an ice storage silo. Level the silo in both directions so that the machine is also level.

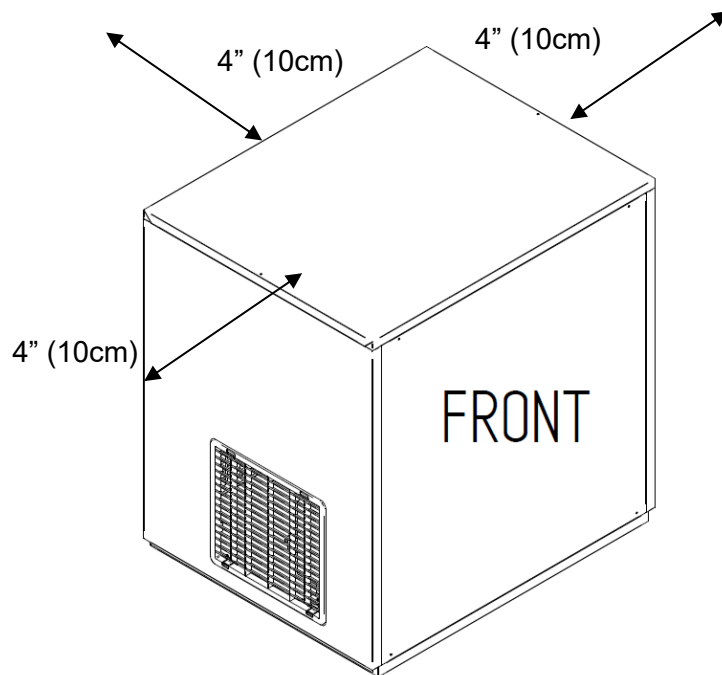

Use a spirit level on top of the ice machine to ensure that the equipment is perfectly level.

Ensure that the window in the silo cover leaves the ice outlet area on the SS free.

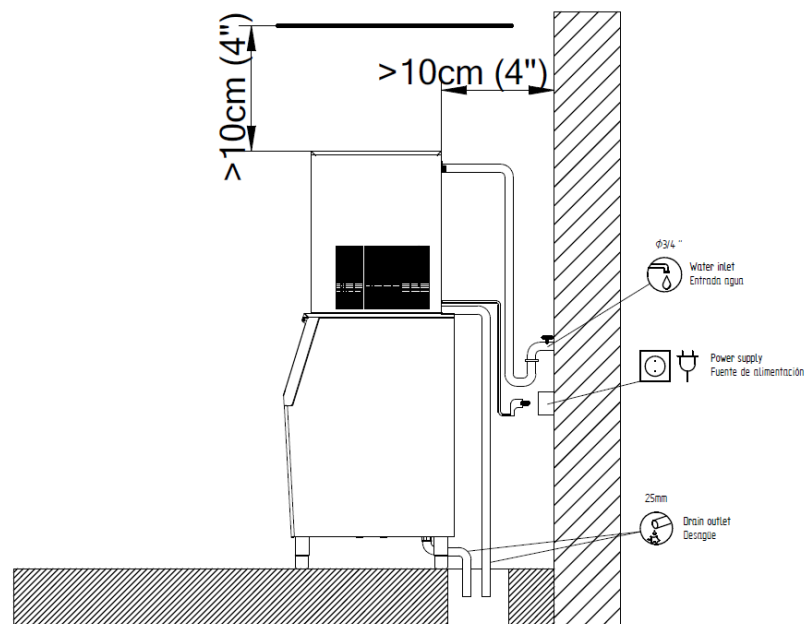

2.4.-MINIMUM DISTANCE TO OBSTACLES

Please see below the recommended minimum distances for proper operation and efficient service.

CONNECTION DIAGRAM:

The location must allow enough clearance for water drain and electrical connections in the rear of the ice machine.

2.5.- WATER SUPPLY CONNECTION

The quality of the water supplied to the ice machine will have an impact on the time between cleanings and ultimately on the life of the product (mainly in water cooled units). It also will have a remarkable influence on the appearance, hardness and flavor of the ice.

Local water conditions may require treatment of the water to inhibit scale formation, improve taste and clarity. If you are installing a water filter system, refer to the installation instructions supplied with the filter system.

Pressure should be between 0.1MPa and 0.6MPa (1 and 6 bar). If pressure overpasses such values, install a pressure regulator.

The water connection needs to be dedicated (only piece of equipment hooked to the water line). Water line from the water valve to the ice machine needs to be ¼" nominal ID tubing.

ATTENTION: The machine shall be plumbed (with adequate backflow protection) according to applicable Federal State and local regulations.

Water-condensed machines have a separate connection and drain for condensation.

2.6.-DRAIN CONNECTION

2.6.1.- GRAVITY DRAIN

Drainage should be located lower to the machine level, at 150mm minimum.

It is convenient that the drain hose is 1,18" (30mm) inside diameter and with a minimum gradient of 3cm/metre, see figure.

The drain must be located below the level of the machine, at least 150 mm below.

The drain hose should have an internal diameter of 30 mm and a minimum slope of 3 cm/metre.

The drains of the machine and the silo must not be connected to prevent water from entering the silo.

2.5.- ELECTRICAL CONNECTION

It is mandatory to ground the equipment. To avoid possible electric shock on individuals or damages to the equipment, the machine should be grounded pursuant local and/or national regulations as the case may be.

The manufacturer shall be held harmless in case of damages arising due to the lack of the ground installation.

In case the supply cable is damaged, it should be replaced by a cable of special assembly to be furnished by the manufacturer or after-sales service. Such replacement should be performed by qualified technical service only.

The machine should be placed in such a way as to allow a minimum space between the back and the wall to allow an easy access and without risks to the cable plug.

Safeguard the socket. It is convenient to install adequate switches and fuses.

ATTENTION: The appliance requires an independent power supply of proper capacity. See the nameplate for electrical specifications. Failure to use an independent power supply of proper capacity can result in a tripped breaker, blown fuse, damage to existing wiring, or component failure. This could lead to heat generation or fire.

Voltage is indicated in the nameplate and on the technical specifications section of this manual. Variation on voltage above the 10% stated on the nameplate could result on damages or prevent the machine start-up.

3. **PRIOR CHECKING AND START-UP**

3.1.- PRIOR CHECKING

- a) Is the machine leveled?
- b) Voltage and frequency are the same as those on the nameplate?
- c) Are the drains connected and operating?
- d) Will the ambient temperature and water temperature remain in the following range?

	ROOM	WATER
<i>MAXIMUM</i>	43°C	30°C
<i>MINIMUM</i>	10°C	10°C

- e) Is water pressure appropriate?

<i>MINIMUM</i>	0.1MPa (1 bar)
<i>MAXIMUM</i>	0.6 MPa (6 bar)

In case inlet water pressure is higher than 0.6 MPa, install a pressure regulator.

3.2.- START-UP

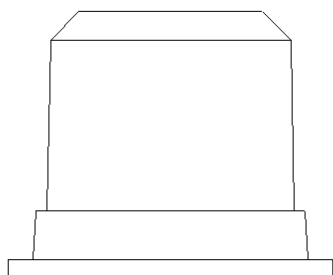

Once the installation instructions are followed (ventilation, site conditions, temperatures, water quality, etc.), proceed as follows:

- 1.- Open the water inlet. Verify the no existence of leakages.
- 2.- Remove the front panel and the ice dispenser cover. Remove the protective elements from the curtain.
- 3.- Verify that the curtain moves freely.
- 4.- Connect the machine to the power supply.
- 5.- Push the switch on the machine front side.

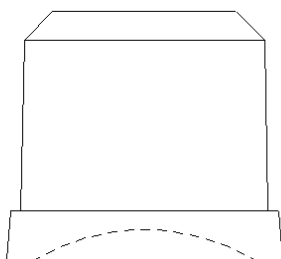

6.- Verify that there are no vibrations or frictions on the elements.

7.- Fit the ice outlet cover and front panel.

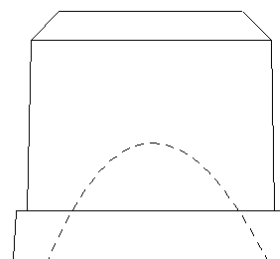

8.- Verify the ice cubs with the pictures below. If necessary, adjust production time switches (see table in 4.1, switches 1-4 (tf)) to make the ice cubes with the right shape.

Too big

Just right

Too small

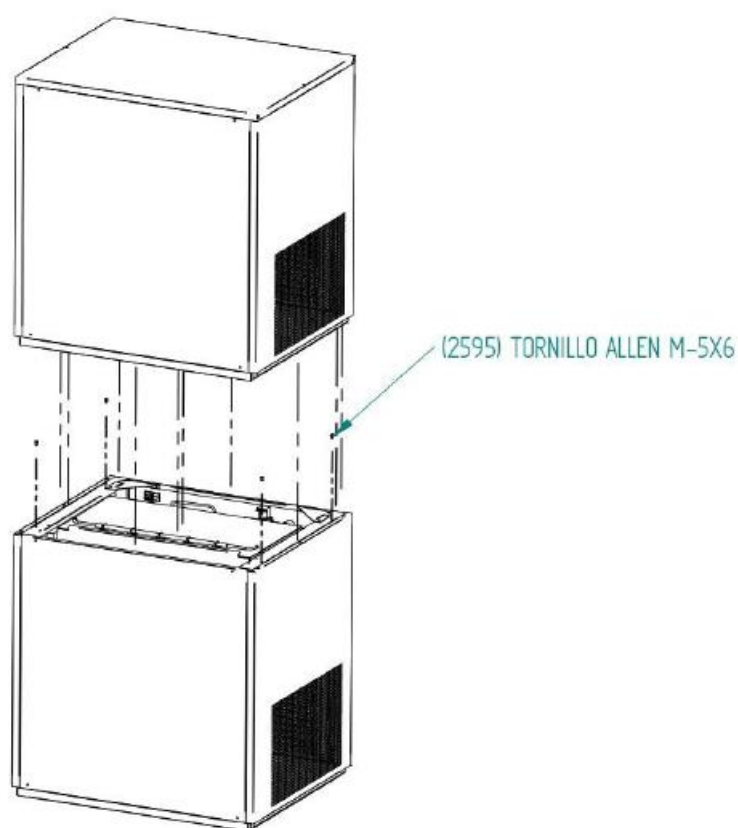

Damages due to the lack of maintenance and cleaning operations are not included on the warranty.

4. **STACKING MACHINES**

The machines can be stacked on top of each other. When the ice from the storage compartment reaches the lower machine, both machines stop.

Use kit #8034U for stacking. The kit includes the parts for assembly and electrical connection.

Follow the assembly instructions supplied with the kit.

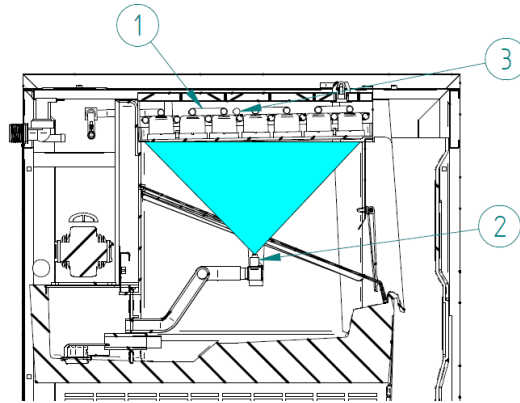

5. SEQUENCE OF OPERATION

Once you connect the machine there is a time delay of 140" during which the water valve is activated to ensure the water tray is filled. Compressor, pump will be off.

Once the time is up, it continues with a harvest cycle and the compressor starts.

After the harvest, the ice production starts, so the pump starts working. The pump, recirculates the water from the water tray to the upper nozzles (#2) distributor which provides a fan of water that waters each ice cube row in the evaporator (#1), in which the water starts freezing and making the ice.

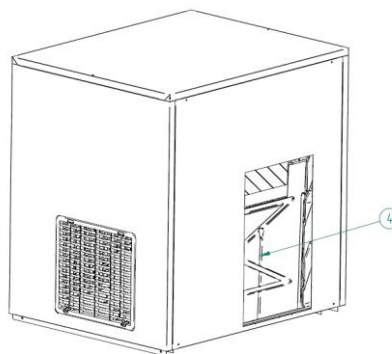

When the temperature probe (#3) at the end of the evaporator reaches an adjusted value **T_c (-12/-8°C)**, the fabrication continues the fixed time with the combination of dip-switches 1-4 (see table). This way we can ensure the filling of the ICE CUBE is correct in different working conditions.

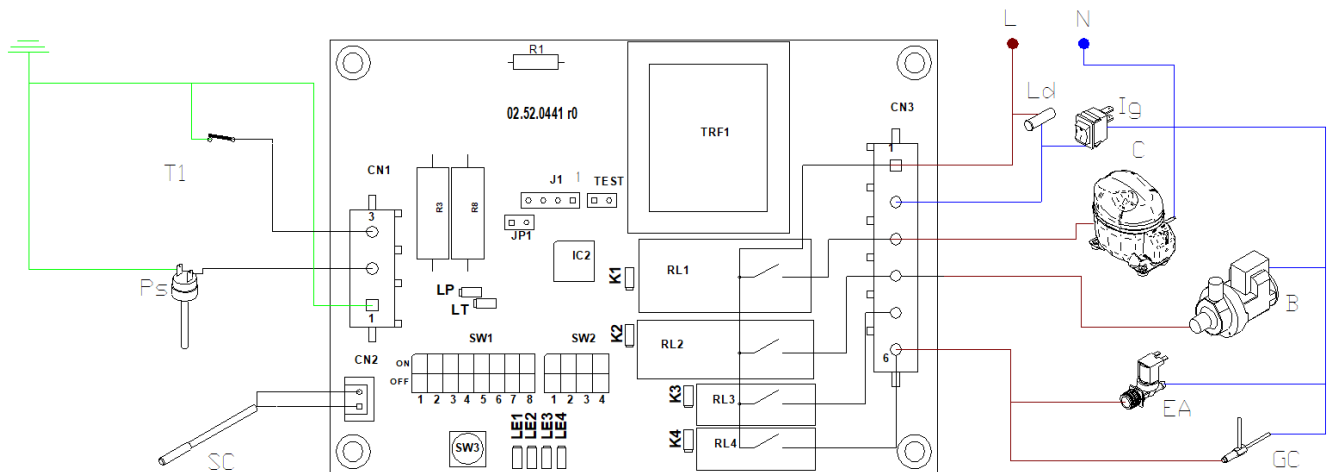

Once the production time is over the harvest phase starts. The pump stops, the hot gas and the water inlet valves open. When the evaporator temperature probe (#3) reaches an adjusted value **T_g (4/0°C)** the harvest continues the fixed time with the combination of dip-switches 5-7 (see table). Water is poured over the evaporator helping unstick the ice cubes from the plastic frame.

After the harvest cycle, the machine comes back to the production cycle.

At the beginning of each Harvest cycle, the PCB checks if the Thermostat is open or close. Once the ice bin is full and the ice cubes cover the thermostat tube (#4), the contact open, so when the harvest begins, the machine will stop until the contact of the thermostat close again. When it close, it starts with a harvest cycle and then it will continue with the production cycle again.

5.1. CONTROL BOARD

PCB connections

Outputs

C	Compressor
B	Water pump
EA	Water inlet valve
GC	Hot gas valve.

Inputs

SC	Evaporator temperature NTC probe
P	Safety pressure switch
N	PCB push button
T1	Stock thermostat

LED signalling

Next to each out relay there is an orange led. Signals relay on

Next to each input terminal there is an orange led marking input active.

There are four additional red leds that signals machine status (continuous) or alarm (flashing)

Status signaling . Continuous led				
	LE1	LE2	LE3	LE4
Start up delay	X			
Ice cycle $T > T_c$	X	X		
Ice cycle $T < T_c$		X		
Harvest $t < t_g$	X		X	
Harvest $t > t_g$			X	
Full bin				X
Alarm signaling . Flashing led				
	LE1	LE2	LE3	LE4
Safety pressure switch	X			
Ice cycle timeout		X		
Harvest cycle timeout			X	

Faulty temperature probe				X
--------------------------	--	--	--	---

Dip switches setting

dip	Descripción (* factory setting)
1-4 (sw1-1/4)	tf - ice production timer. See table
5-7 (sw1-5/7)	tw - Water input timer. See table.
8 (sw1-8)	Tc - Evaporator temperature for timer start. ON=-12°C / OFF=-8°C
9 (sw2-1)	Tg (Hot valve temperature). ON=+4°C / OFF=+0°C
10 (sw2-2)	Safety high pressure switch trip function. ON= automatic reset (minimum stop 30 min.) OFF= manual reset (power OFF-ON)
11 (sw2-3)	Timeout alarms operation ON = activated OFF = unactivated
12 (sw2-4)	Software selection. Always ON

ICE / WATER TIMER SETTING									
SW1				TF (MIN)		SW1			TW (SEG)
1	2	3	4			5	6	7	
OFF	OFF	OFF	OFF	6		OFF	OFF	OFF	40
ON	OFF	OFF	OFF	8		ON	OFF	OFF	60
OFF	ON	OFF	OFF	10		OFF	ON	OFF	80
ON	ON	OFF	OFF	12		ON	ON	OFF	100
OFF	OFF	ON	OFF	14		OFF	OFF	ON	120
ON	OFF	ON	OFF	16		ON	OFF	ON	140
OFF	ON	ON	OFF	18		OFF	ON	ON	160
ON	ON	ON	OFF	20		ON	ON	ON	180
OFF	OFF	OFF	ON	22					
ON	OFF	OFF	ON	24					
OFF	ON	OFF	ON	26					
ON	ON	OFF	ON	28					
OFF	OFF	ON	ON	30					
ON	OFF	ON	ON	32					
OFF	ON	ON	ON	34					
ON	ON	ON	ON	36					

The dip-switch settings for each machine model are indicated in the wiring diagram printed on the machine panel.

5.2.- ALARMS

They detect operational malfunctions. They are indicated with the flashing status Leds LE1-4. During some alarms a second operation retry attempt is carried out and if repeated again, the machine will stop. Signaling should be indicated since the first failure occurs. If the second retry attempt is ok, the signaling will switch off.

In case that a machine stop has been caused by alarm, the reset is done by switching OFF and ON the main switch. If the dip-switch 11 OFF, time alarms are not to be followed.

5.2.1 SAFETY HIGH PRESSURE SWITCH

When the pressure contact (P) trips, instantly, all outputs switch over to off position.

When it is closed again, there are two possibilities:

- Dip-switch 10 OFF. Manual reset. The machine remains stopped until reset to Initial start-up.
- Dip-switch 10 ON. Automatic reset. The machine check pressure switch status every 30 min. When closed, the machine will continue at the position where it was.

* Signalling: Flashing LE1.

5.2.2 LONG HARVEST

If the harvest time is longer than 5 min., the harvest is interrupted, switching over to the production cycle. If the same happens again at the next harvest, the machine will stop.

* Signalling: Flashing in LE3.

5.2.3 ICE PRODUCTION CYCLE TIMEOUT

If during the production cycle, evaporator temperature probe has not reached the set temperature Tc in more than 60 min, the machine will stop until reset.

* Signalling: Flashing in LE2.

5.2.4 FAULTY TEMPERATURE PROBE

If PCB detects that evaporator temperature probe is broken or unconnected, the machine will stop

* Signalling: Flashing in LE4.

Probe type is NTC and resistance value must be 10kΩ at 25°C.

5.3 PCB PUSH BUTTON FUNCTION

Function depends on the unit status:

- Start up timer: Finish initial delay y passes to ice production stage
- Ice production. Switches to harvest
- Harvest. Switches to Ice production

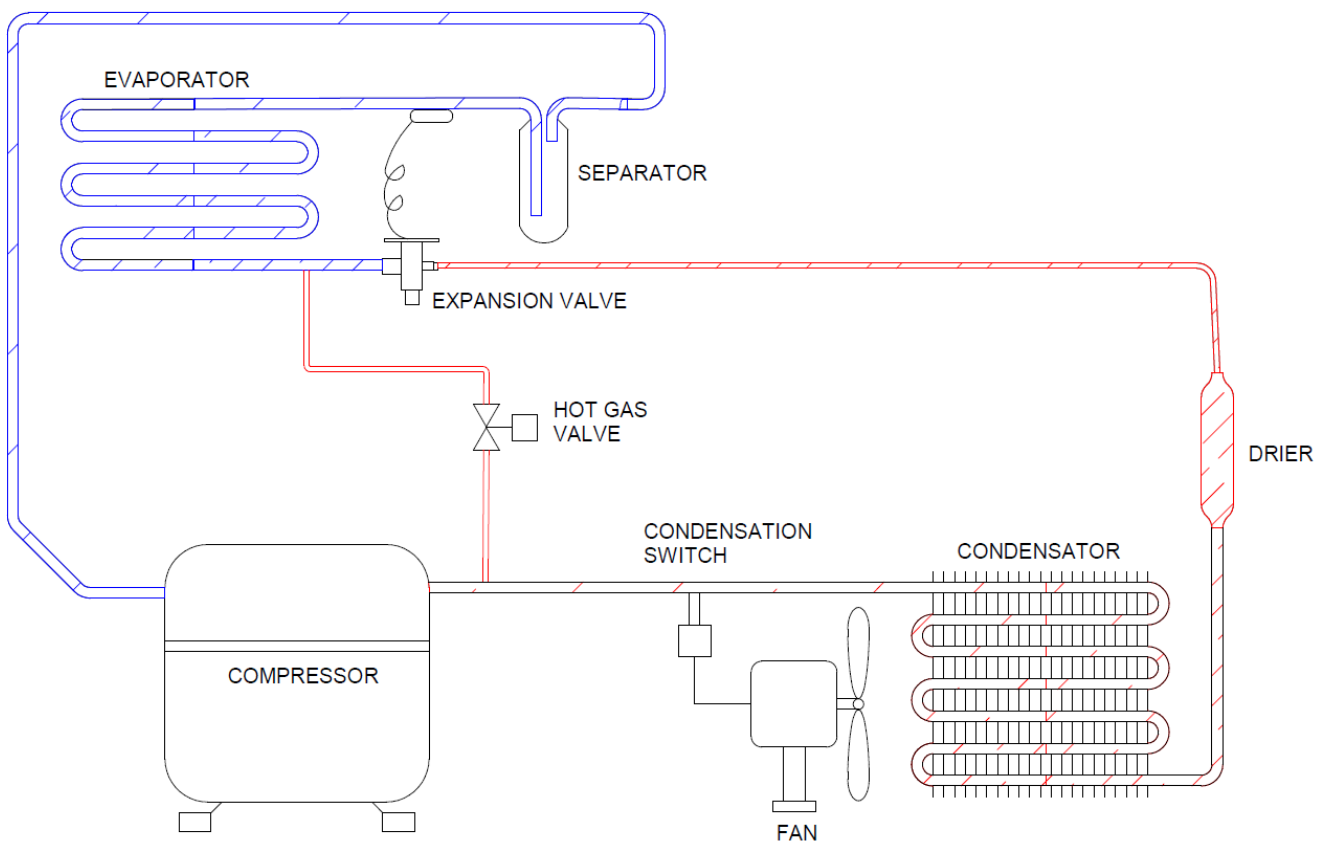

Wash cycle activation.

Keep pressed the button while switching on main front switch. Wash cycle is activated and only the water recirculation pump is running. There is a maximum time for this cycle of 30 min. After this time, pump stops.

Wash cycle is finished by switching off main power.

Read cleaning and sanitizing instructions for proper usage of this function.

6. Refrigeration diagram

7. MAINTENANCE AND CLEANING PROCEDURES

It is the User's responsibility to keep the ice machine and ice storage bin in a sanitary condition. Ice machines also require occasional cleaning of their water systems with a specifically designed chemical. These chemical dissolves mineral build up that forms during the ice making process. Sanitize the ice storage bin as frequently as local health codes require, and every time the ice machine is cleaned and sanitized.

The ice machine's water system should be cleaned and sanitized at least twice a year.

CAUTION: Do not mix Ice Machine Cleaner and Sanitizer solutions together.

WARNING: Wear rubber gloves and safety goggles when handling Ice Machine Cleaner or Sanitizer.

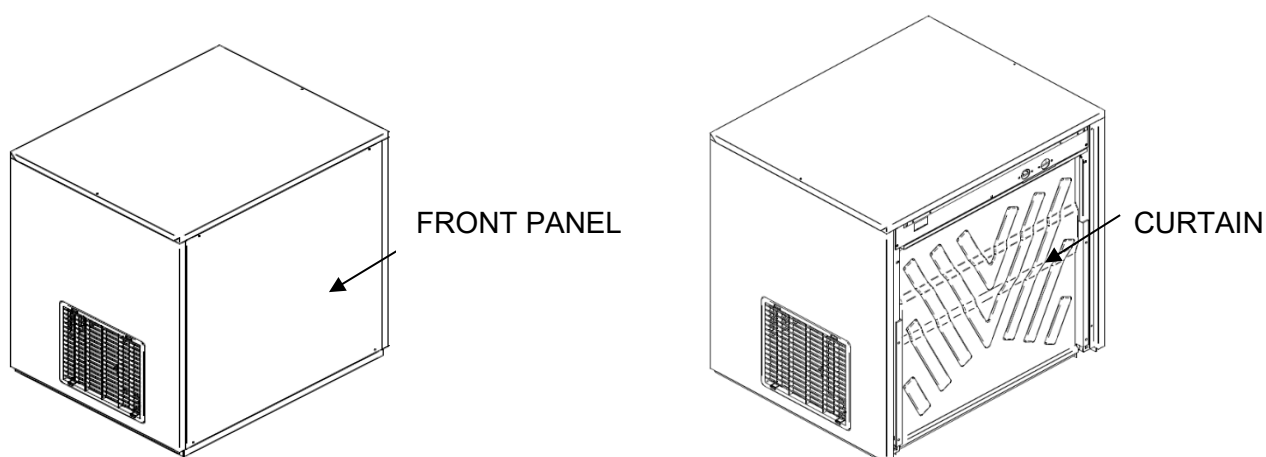

WARNING: Unit should always be disconnected during maintenance/cleaning procedures.

6.1.- CLEANING WATER DISTRIBUTION SYSTEM

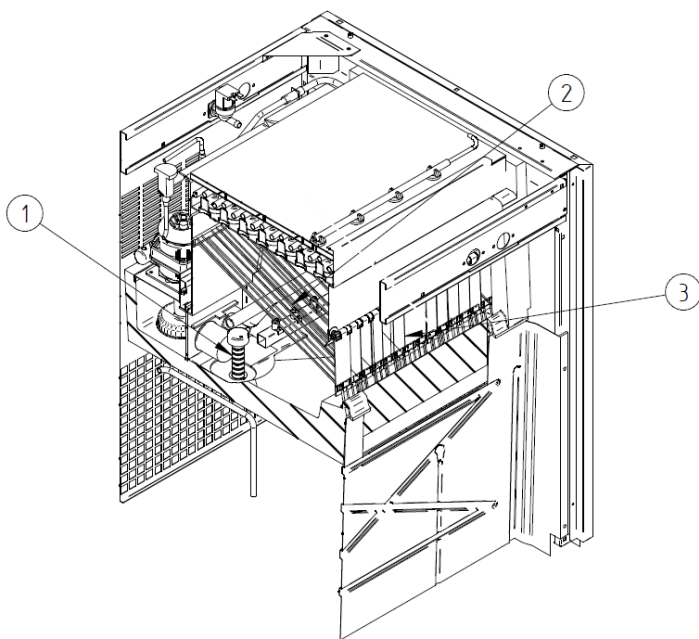

- a) Set the switch to the OFF position after ice falls from the evaporator at the end of a harvest cycle or set the switch to the OFF position and allow the ice to melt off the evaporator.

CAUTION: Never use anything to force ice from the evaporator.

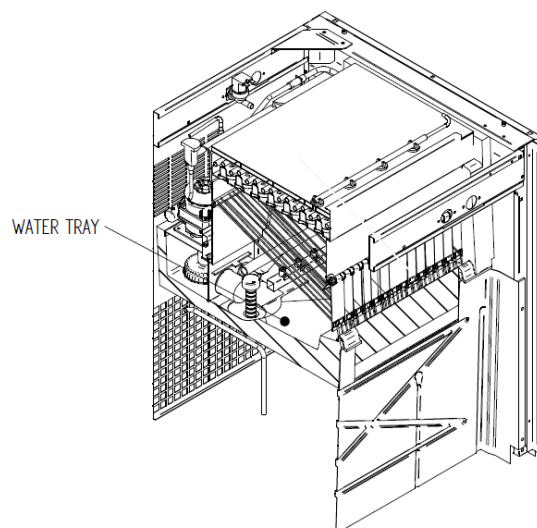

- b) Remove all ice from the bin.

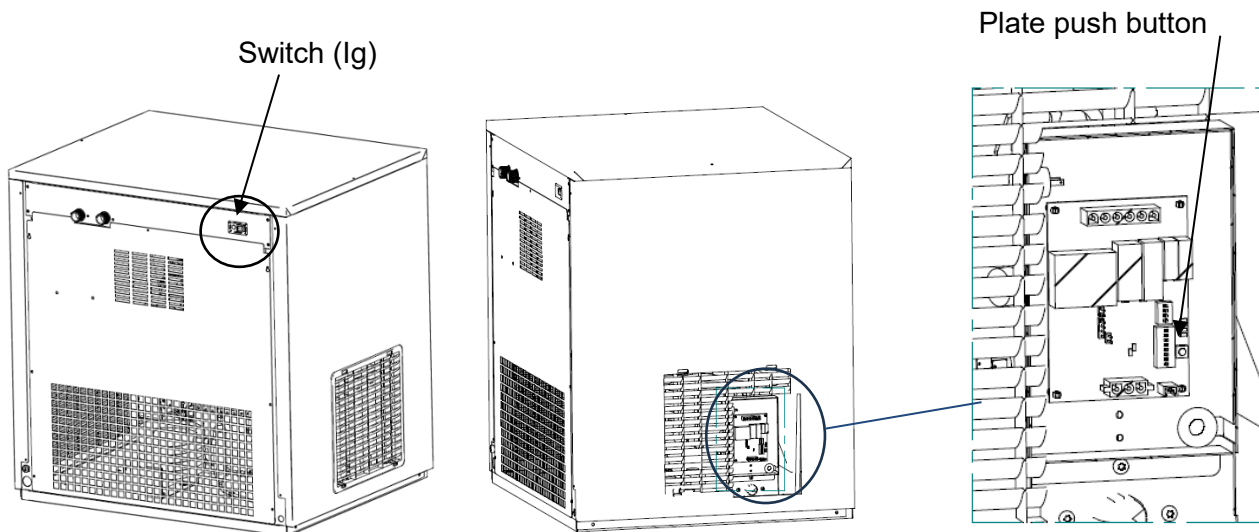

- c) Remove the curtain (#3), the grid (#2) and the water overflow (#1) to empty the water tank. Return everything to its original position to prevent water spillage.

- d) Prepare a solution of an appropriate product for the cleaning of ice machines (lime). Do not use hydrochloric acid. We recommend the use of any approved scale removal product prepared according to the manufacturer's instructions as for example Scale Kleen.
- e) Fill water tray with the solution

- f) Disconnect power. Turn on the machine pushing SW3 (see picture). Let solution stand for 30-40 minutes and then switch off the machine. Disconnect power

- g) Disconnect power.
- h) Remove the water overflow (#1) and empty the water tray (#2). Return it to their original position to avoid water spill.
- i) Mix enough cleaning solution (as in point e) to clean parts and interior food zone surfaces.
- j) Clean all surfaces of the shield (#3) with the cleaner solution using a brush (not a wire brush) or cloth. Rinse all areas with water.
- k) Clean all the interior surfaces of the freezing compartment (including storage bin) with the cleaner solution using a brush or cloth. Rinse all areas with water.
- l) Mix a solution of sanitizer using approved (EPA/FDA) sodium hypochlorite food equipment sanitizer to form a solution with 100 - 200 ppm free chlorine yield. Below an example to calculate the proper quantity of sanitizer to add to the water, for a household bleach 12,5%:

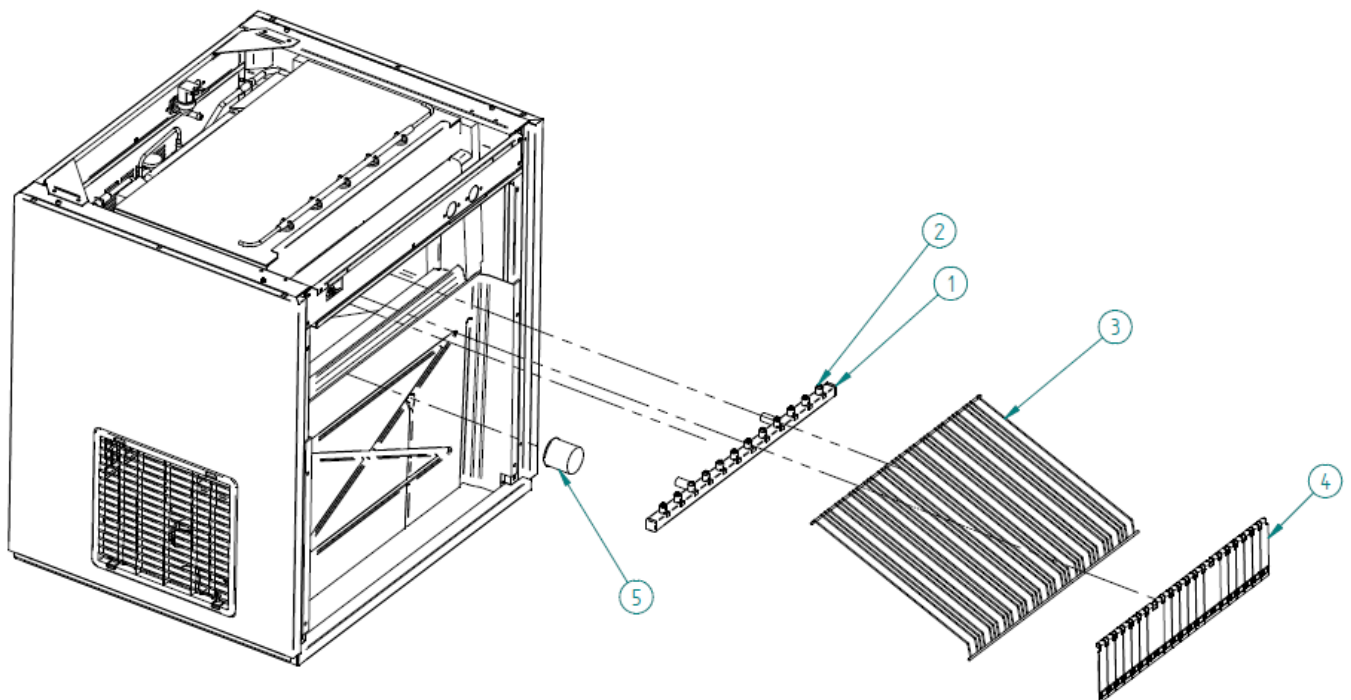

$$\text{bleach to add} \Rightarrow \frac{15}{\% \text{dis}} = \frac{15}{12.5} = 1.2 \text{ gr/L} \rightarrow *0.133 = 0.16 \text{ oz/gal}$$
- m) Sanitize all the interior surfaces of the freezing compartment (including the storage bin) applying liberally sanitizer solution, using a cloth or sponge.
- n) Connect power and water supplies.
- o) Fill water reservoir with the sanitizer solution.
- p) Switch on machine in order to run water pump. Let solution stand for 20 minutes and switch off.
- q) (ONLY NG30) Remove the auxiliary pipe to drain and purge out the sanitizer solution and residue. Replace it.
- r) Remove the water overflow (#1) and empty the water tray (#2). Return it to their original

position to avoid water spill.

- s) Fill the water reservoir with water and switch on the machine to allow water to circulate for 5 minutes and then stop the machine. Repeat this operation two more times to rinse thoroughly.
- t) Remove the auxiliary hose to drain the water. Replace it and fill the tray with water to ensure the pump works properly.
- u) (ONLY NG30) Return the back metal lid and the top panel to their position.
- v) Switch on machine and discard the first two harvests.

7.2.- CLEANING WATER DISTRIBUTOR AND INJECTORS

- 1) Remove the curtain (#4). (Take advantage to clean it with Calklin or some non-aggressive product, rinse, clean with bleach and rinse under the tap).
- 2) Remove the ice fall grill (#3). (Clean it just like the curtain).
- 3) PULL UP THE COLLECTOR (#1) (IT IS PRESSURE MOUNTED)
- 4) Remove the nozzles (#2) and the manifold covers, clean them.
- 5) Remove and clean the main suction filter (#5) of the pump. (IT IS PRESSURE MOUNTED)
- 6) Fit filter, injectors, and collector.

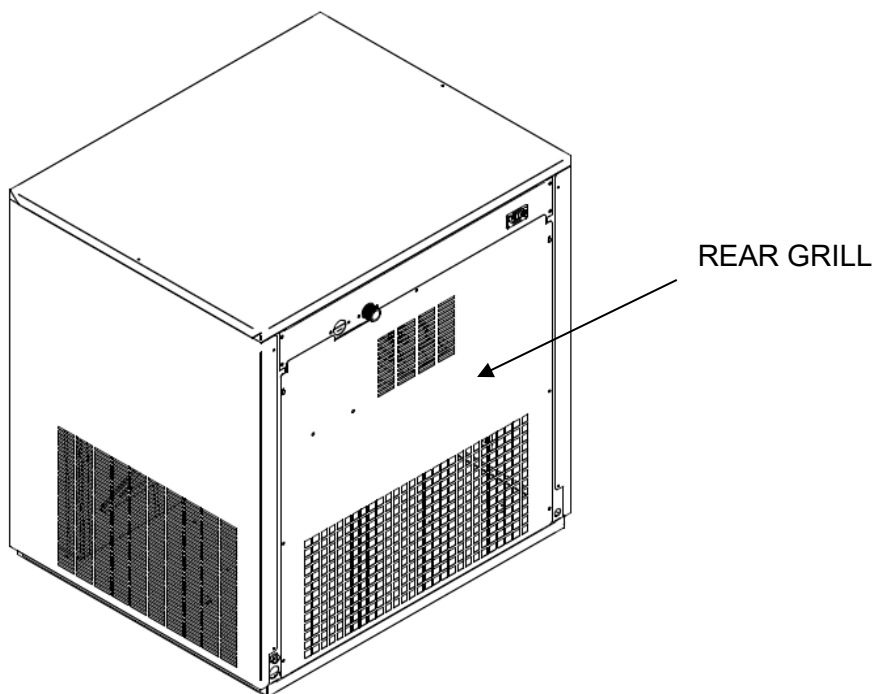

ATTENTION: IT IS VERY IMPORTANT, WHEN REPLACING THE MANIFOLD THAT THE INJECTORS ARE COMPLETELY PERPENDICULAR TO THE SAME. IF THE CUBES AT THE END ARE TWISTED, THEY CAN REMAIN WITHOUT WATER.

7.3.- CLEANING THE CONDENSER

AIR CONDENSER

- 1) Disconnect machine and close water faucet.
- 2) Remove the front grid by pressing the two clips placed at right side (see figure).

- 3) Clean condenser using a vacuum cleaner, soft brush or low pressure air. Clean from top to bottom, not side to side. Be careful not to bend the condenser fins.

WATER CONDENSER

The water condenser may require cleaning due to scale build-up. The cleaning procedures require special pumps and cleaning solutions. They must be performed by qualified maintenance or service personnel.

7.4.- EXTERNAL CLEANING OF THE MACHINE

Clean the area around the ice machine as often as necessary to maintain cleanliness. Sponge any dust and dirt off the outside of the ice machine with mild soap and water. Wipe dry with a clean soft cloth. A commercial grade stainless steel cleaner/polish can be used as necessary.

7.5.- WATER LEAKAGE CHECKING

This must be done whenever maintenance is carried out on the machine: check all water connexions, braces, tubes and hoses in order to eliminate leaks and prevent breakages and flooding.

7.8.- MAINTENANCE TABLE

PROCEDURE	MONTHLY	QUARTERLY	HALF YEARLY	YEARLY	BIENNIAL	DURATION
Air condenser cleaning	***	***	■■■	■■■	■■■	30 minutes
Water condenser cleaning				□□□	■■■	90 minutes
Injectors cleaning		□□□	□□□	■■■	■■■	30 minutes
Fabrication head filter cleaning			□□□	■■■	■■■	30 minutes
Water circuit cleaning		□□□	□□□	■■■	■■■	45 minutes
Sanitary cleaning		□□□	□□□	■■■	■■■	30 minutes
Water filter cleaning/replacement	□□□	□□□	■■■	■■■	■■■	30 minutes
General unit cleaning	◆◆◆	◆◆◆	◆◆◆	◆◆◆	◆◆◆	--

*** Depending on room characteristics

□□□ Depending on water quality

◆◆◆ Carried out by owner

■■■ Essential

Maintenance and cleaning procedures as well as problems derived from failing to carry them out **ARE NOT COVERED BY THE WARRANTY.** Service personnel will invoice you for travel expenses, time invested and materials required for maintenance and cleaning of unit.

8. USER TROUBLESHOOTING GUIDE

8.1. GENERAL QUESTIONS

PROBLEM		POSSIBLE CAUSES	SOLUTION
None of the electrics work. Front switch ON but pilot is OFF		The machine is not plugged in.	Plug the machine and verify socket power
None of the electrics work. Front pilot is ON		Full bin status (LE4 on) with no ice.	Adjust / replace
		Faulty or bad adjusted thermostat	
		PCB alarm.	Check led code
PCB alarms. See point 4.2			
High pressure switch	Dirty condenser		Clean condenser
	Defective fan		Check. Replace
	Defective safety / cooling switch		Check. Replace
NTC probe error	Defective probe		Check. Replace
	Defective probe plug connection		Check
Ice cycle timeout	No frozen evaporator		Check refrigeration system
	NTC probe faulty contact		Check probe fitting
Harvest cycle timeout	Faulty hot gas valve/coil		Check. Replace
Wrong cycle sequence	Harvest do not happen		Check water inlet strainer
	Dip-switch 2-4 OFF		Set ON
White and partially formed cubes. Not uniform nozzles spray	Dirty nozzles		Clean / replace
	Dirty suction filter		Clean
	Lack of water at cycle's end		Check water leaks Check water inlet strainer
No water at nozzles	No water input		Check supply and water valve operation
	Faulty pump		Check / replace
	Overflow pipe out of place or leaking		Check tube and o-ring
Too large cubes	Freezing time too large		Adjust by dip-switches
	Probe makes bad contact		Position well
Too small cubes	Uniform	Freezing time too short	Adjust by dip-switches
	Not Uniform	Low refrigeration performance	Check refrigeration system
		Poor refrigerator performance	
Not all cubes are released	Harvest time too short		Adjust by dip-switches
	Freezing time too large (Ice slab)		Adjust by dip-switches
	Faulty hot gas valve		Check / replace
	Lack of water input		Check net pressure and input filters
	Faulty fan pressostat (non stop)		Check / replace
Low ice production	Blocked condenser or air access to condenser		Clean condenser; improve air circulation
	Faulty hot gas valve, doesn't close totally.		Replace
	Low performance refrigeration system		Check
All the electrics work except compressor.	Faulty contact.		Check wiring.
	Faulty relay .		Replace relay.
	Faulty "Klixon".		Replace Klixon.
	Faulty compressor.		Replace compressor.
All the electrics work but the compressor "klixons" (cycles intermitently).	Voltage too low.		Check voltage.
	Obstruction in air circulation.		Move machine to a correct position.
	Start / run capacitor faulty.		Replace condenser.
	Cooling presostat faulty or wrongly adjusted.		Replace or adjust presostat.

8.2. DRAIN FORCE

The bin is flooded	The check valve is blocked	Clean or Replace it
	The pump is broken	Replace it
	The electrodes do not detect water	Disassemble and clean, if problem persist, replace it
The pump is always turn on	The electrodes detect water even if there is no water	Disassemble and clean the electrodes
